

Criando Pastas

1. Digite o nome da pasta que deseja criar;
2. Insira o caractere “/”, será criada uma estrutura, e um campo para nome de arquivo será apresentado;
3. Crie o arquivo “README.md”, com o conteúdo apresentado no exemplo abaixo.

The image consists of three screenshots illustrating the steps to create a new folder and file in a GitHub repository.

Top Screenshot: Shows the repository path **ADS-IFSC / ADS-2016.01-Semestre.02**. Below the path are tabs for **Code**, **Issues 0**, **Pull requests 0**, **Wiki**, and **Pulse**. A text input field contains **Nome-da-pasta**, followed by a red circle with the number **1** indicating the first step.

Middle Screenshot: Shows the same repository path. The text input field now contains **Nome-da-pasta / README.md**, with a red circle with the number **2** indicating the second step.

Bottom Screenshot: Shows the **Edit new file** interface. The file content is as follows:

```
1 # Nome da Pasta
2
3 Descrição da pasta
```

A red circle with the number **3** is positioned next to the third line of code, indicating the third step.
